

R

Batch jobs

If you have a R script called `job.r`, you can run it from your submit script with the following command:

```
R CMD BATCH -q job.r job.out
```

The `job.out` determines where printed output from `job.r` goes. If you have multiple jobs running at the same time this will cause your jobs to overwrite each others output. In this case, replace the command with the following:

```
R CMD BATCH -q job.r job.${PBS_JOBID/.*}.out
```

which will place the output in files called `job.$JOBNUMBER.out`

Rscript jobs

If you create a `job.r` with the following contents:

```
#!/usr/bin/Rscript  
print("Hello Batch World!")
```

To run the script with `Rscript`, we must first authorize the file:

```
$ chmod +x job.r
```

Then, we can either run the file with:

```
$ Rscript job.r
```

Or:

```
$ ./job.r
```

Doing so will produce output directly in the terminal, e.g.

```
$ Rscript job.r  
[1] "Hello Batch World!"
```

Installing Additional Packages

You can install packages from CRAN yourself by using the following R command:

```
install.packages(c("gamlss"), dependencies=TRUE,
```

```
repos='http://cran.rstudio.com/')
```

Assuming that you do not have a personal library directory you will see this Warning

“Would you like to use a personal library instead? (y/n)”

Select 'y'

and **Select 'y'** again when prompted to create the directory

your package should download and install into your personal library directory.

replacing *gam/ls* with your own list of package names.

You can list the installed packages with the command:

```
installed.packages()
```

rJava

You can install package rJava from CRAN yourself by using the following R command: Login into submit node, and perform the following:

Enter an interactive job.

```
[user@submitnew ~]$ qsub -I
qsub: waiting for job xxxxx.mau.grid.fe.up.pt to start
qsub: job xxxxx.mau.grid.fe.up.pt ready
```

Configure java environment for R

```
[user@compute-node ~]$ R CMD javareconf -e
Java interpreter : /bin/java
Java version      : 1.8.0_191
Java home path    : /usr/lib/jvm/java-1.8.0-
openjdk-1.8.0.191.b12-0.el7_5.x86_64/jre
Java compiler     : /bin/javac
Java headers gen.: /bin/javah
Java archive tool: /bin/jar

trying to compile and link a JNI program
detected JNI cpp flags : -I$(JAVA_HOME)/../include -
